This invention relates to a paper feeding apparatus for an image forming apparatus such as a printer, a copying machine, or the like. As a paper feeding apparatus for such an image forming apparatus, an apparatus, as disclosed in Japanese Unexamined Patent Publication No. 6-106633 is known, which comprises a paper cassette (container) for storing a plurality of sheets of a paper having a predetermined size, a paper feeding roller mounted on a shaft on the paper cassette, and a paper feeding roller rotatable integrally with the shaft, which are driven in a paper feeding direction to feed the paper from the paper cassette to the paper feeding roller, and which further includes an urging member, which urges the paper feeding roller in the paper feeding direction, and which has a first end portion which is abutted with an end face of the paper cassette, and a second end portion which is slidably supported by a front wall of a housing of the image forming apparatus and which is urged by a spring to be engaged with the paper feeding roller. In the apparatus described above, when the paper cassette is not inserted in the image forming apparatus, the urging member is urged in the direction in which the paper feeding roller and the paper feeding roller are separated from each other. With this urging force, the paper feeding roller and the paper feeding roller are engaged with each other so that the paper feeding roller is positioned at a predetermined paper feeding position when the paper cassette is not inserted. On the other hand, when the paper cassette is inserted in the image forming apparatus, the urging member is urged in a direction opposite to the paper feeding direction. With this urging force, the paper feeding roller and the paper feeding roller are disengaged from each other and the paper feeding roller is moved in the paper feeding direction. In the above-described conventional apparatus, when the paper cassette is inserted into the housing of the image forming apparatus, the urging member urges the paper feeding roller against the end face of the paper 82157476af
